 145-140cm: Crust
 118-100cm: Frozen old snow

Notes: Various wind slabs in the top part of the snowpack, from the surface down to 118cm, from the moderate to heavy snowfalls and several strong wind events over the past 2-3 weeks.

Connection between them is fairly ok, nothing worrying in terms of snow crystals was found.

Bottom part of the snow below these slabs seems frozen solid.

Small wet loose avalanche observed on opposite, very steep southwest facing slope below Debeli Rid.
