HS:100
PF:20
9.6-0cm:Problematic layer

Layer Notes:

Notes: Clear, bluebird day. Dug pit down off the ridge in a wind sheltered slope. It seemed very representative of all the other slopes in that area based on probing with my ski pole. Persistent weak layer still exists but it has become increasingly difficult to propagate--takes full arm blows to get it to go. Most slopes throughout the range are tracked out.
