 Wind:

HS:115  
 71-67cm: SS-ASu-R1-D2-O  
 71-67cm: Problematic layer

**Notes:** Crown Profile for the avalanche from December 26th, 2018 on the ESE side of the Nose of Four Pines (LOBB). Stability tests were performed on an aspect 10 degrees less than the avalanche occurred on 15 feet from the crown where the weak layer did not collapse. On this aspect the bed surface crust was not present.
