**Sky Cover:** OVC  
**Precipitation:** S2  
**Wind:**

**HS:**90  
**PF:**57  
**Layer Notes:**  
 90-75cm: current storm snow  
 75-50cm: loose, slightly faceted  
 12-0cm: shrubby  
 12-0cm: Problematic layer

Crystal Form	Crystal Size	Moisture	$\rho$ kg/m <sup>3</sup>	Stability tests & Layer comments
				90-75cm: current storm snow
				75-50cm: loose, slightly faceted
				← ECTPV @11cm ← CT6, Q2 @11cm 12-0cm: shrubby

**Notes:** Small intermittent shrubs at base of pit breaking up basal facet layer. No rain here. 50 - 75 cm layer may have been weak layer for yesterday's avalanches at higher elevations. Lacking a slab here, no wind load, not enough new snow.
