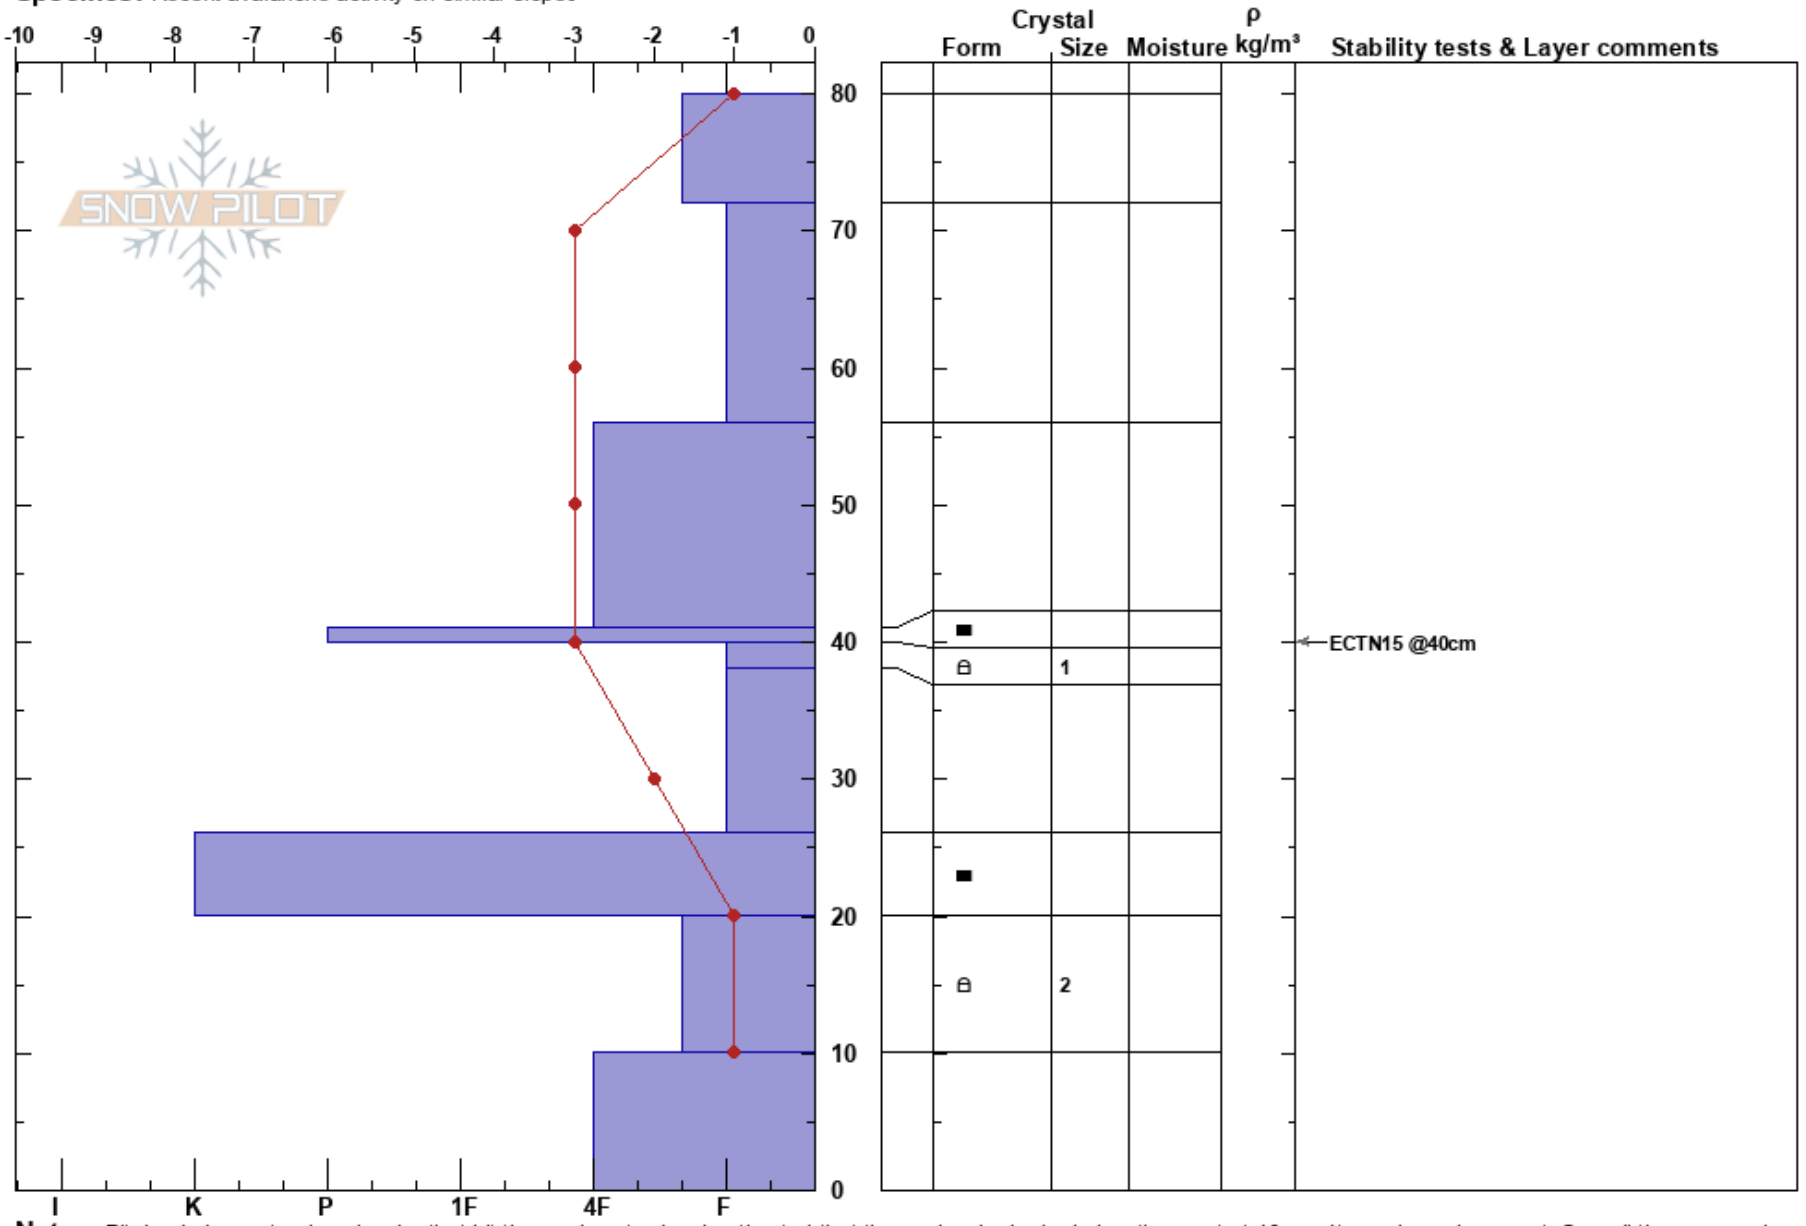
Co-ord: 41.33393N, -111.89248W
Slope Angle: 15°
Wind Loading:

Stability: Fair Unstable
Air Temperature: -1°C
Sky Cover:
Precipitation:
Wind:

HS:80

Layer Notes:
40-38cm: Problematic layer

Specifics: Recent avalanche activity on similar slopes



Notes: Pit dug below natural avalanche that hit the road yesterday. I estimated that the avalanche broke below the crust at 40 cm. It may be a rime crust. Overall the snowpack was very warm and seemed damp. Temperature profile shows warm snow. It seems reasonably stable because it is so warm and damp.
