

Rattlesnake 1/10/19
 Rattlesnake Mtns
 MT
 Elevation: 7450 ft
 Aspect: 107°
 Specifics:

Evan Ruddell
 01/10/2019 - 12:40pm
 Co-ord: 47.03507N, -113.98820W
 Slope Angle: 35°
 Wind Loading: previous

Stability: Fair
 Air Temperature: -1.1°C
 Sky Cover: X
 Precipitation: S-1
 Wind: N Calm

HS:110
 PS: 17 25-0cm: Problematic layer

Notes: Still a relatively shallow snowpack, the recent warm temps seem to have helped the upper layers, but basal facets are still present, and more concerning, they actually propagated in an ECT in this pit, albeit with a good bit of force and a very poor quality shear. Overall things seem to be improving, but still a very questionable, very weak incohesive layer right above ground in our snowpack.
