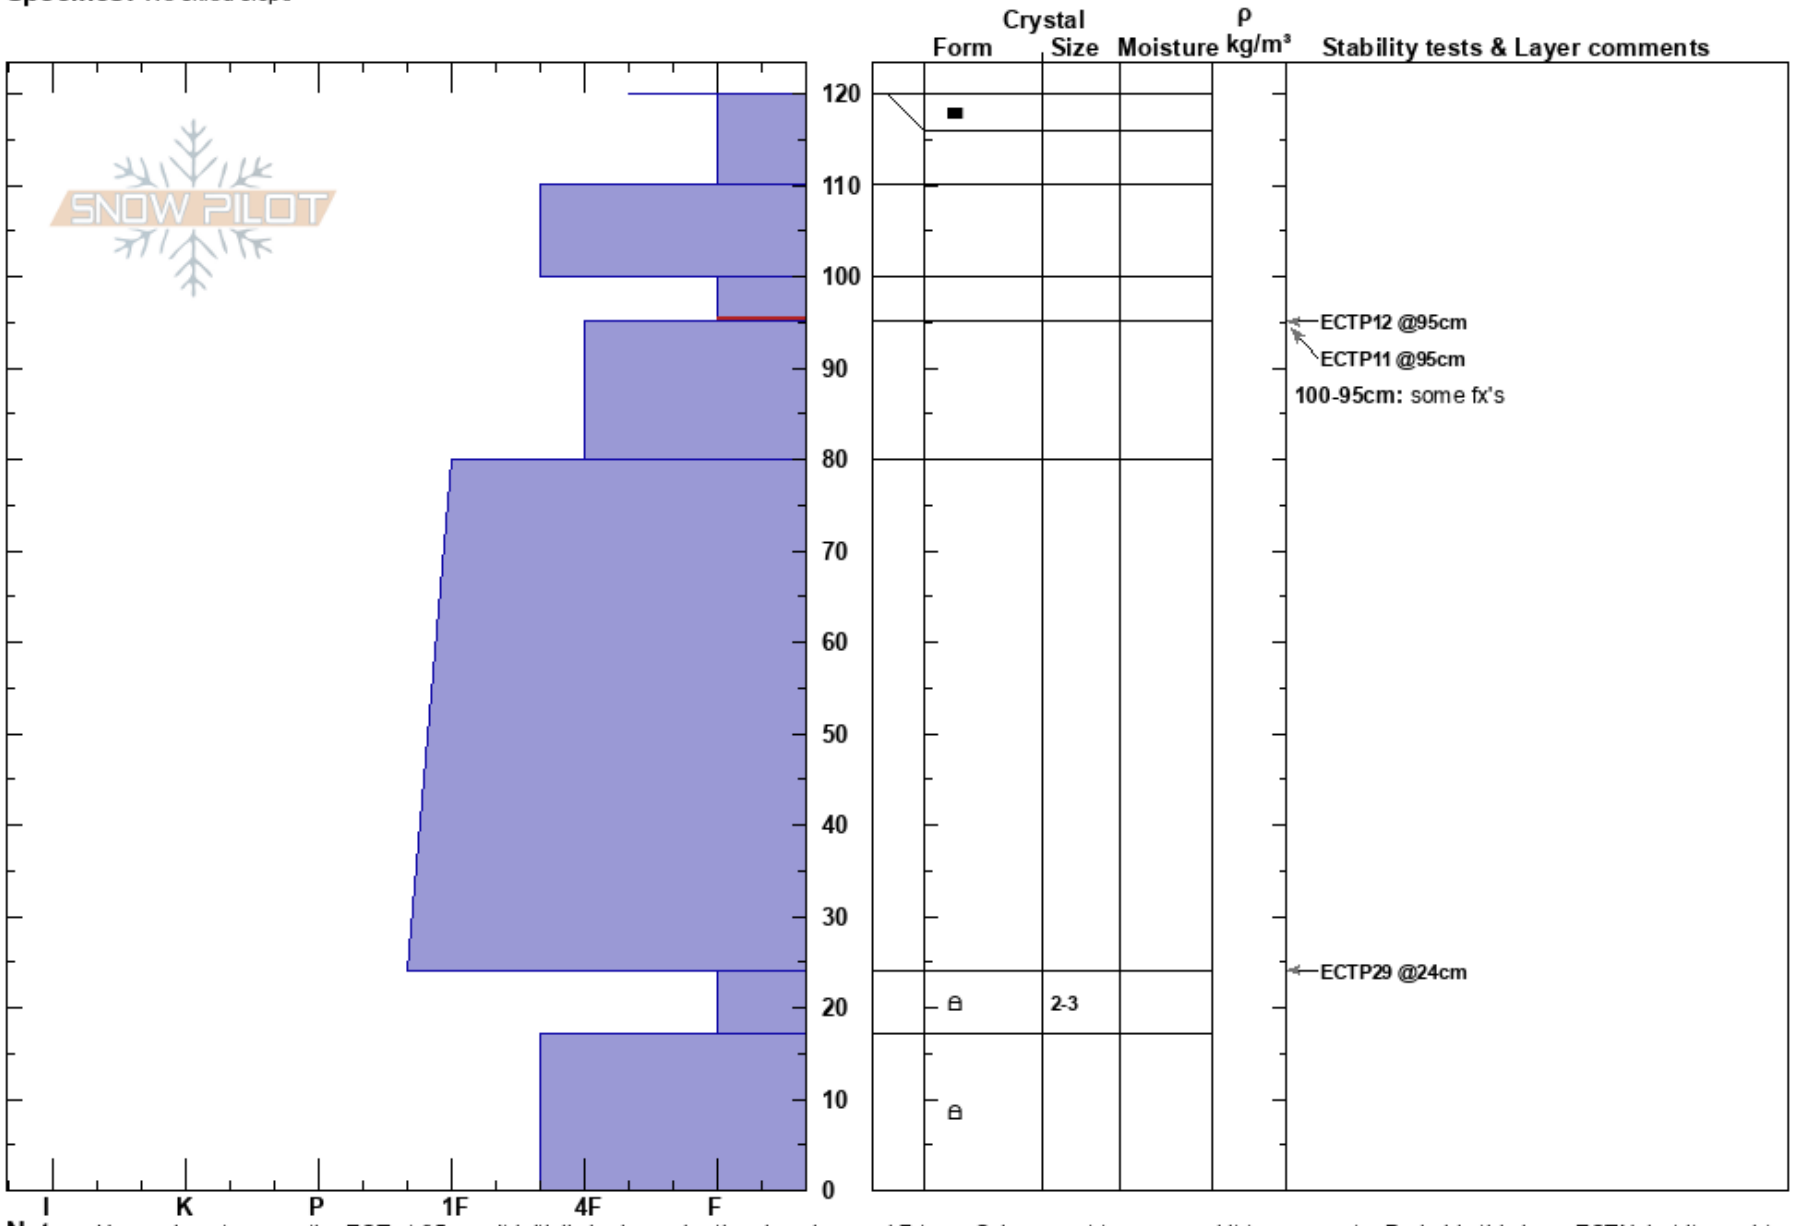
Slope Angle:
Wind Loading:

Stability: Good
Air Temperature:
Sky Cover:
Precipitation:
Wind:

HS:120

Layer Notes:
100-95cm: some fx's
100-95cm: Problematic layer



Notes: Unsure how to score the ECT at 95 cm. It initially broke under the shovel around 7 taps. Subsequent taps caused it to propagate. Probably this is an ECTN, but it caught my attention and I wasn't going to ignore the fact that it seemed to want to propagate.

The layer of snow from 95 to 100 cm was mostly broken new snow particles but they did have some faceting.
