 01/26/2019 - 1:49am
 Co-ord: 40.55222N, -111.63152W
 Slope Angle: 12°
 Wind Loading: no

Stability: HS:210
 Air Temperature: -1.9°C PF:40
 Sky Cover: CLR PS: 10
 Precipitation: NO
 Wind: N Strong

Specifics: Recent avalanche activity on different slopes; We skied slope

Notes: wind blowing through trees, depositing on surface, filling in tracks and depressions but not forming a crust currently.
 first few clear days since a little over a stormy week with heavy PI, big HST and strong winds contributing to transport. Large avalanches widespread, mostly triggered with explosives in wind loaded areas, seeing signs of PWL being overloaded as many of the slides are failing at/near the ground.
