Stability: Fair HS:136 Layer Notes:  
Air Temperature: 6.5°C PS: 15  
Sky Cover: FEW  
Precipitation: NO  
Wind: NE Calm

Elevation:  
Aspect: SE  
Slope Angle: 25°  
Wind Loading: previous

Specifics: Recent avalanche activity on similar slopes; Recent avalanche activity on different slopes; Ski tracks on slope; Poor pit location

Notes: This pit was a full test plus pit dug for the students on the Avi forecasting class. We discovered two lemons within the snowpacks strength. first, consisting of a persistent grain type at the FP. second, was a FP in the top 100cm on the snow pack. No propagation propensity. Good snow pack.
