

Jono's Journey  
 Remarkables Range  
 New Zealand  
**Elevation:** 6330 ft  
**Aspect:** SE

Mark Russell  
 09/09/2019 - 15:00  
**Co-ord:**  
**Slope Angle:** 37°  
**Wind Loading:** previous

**Stability:** Very Good **HS:**98  
**Air Temperature:** -3°C **PF:**25  
**Sky Cover:** CLR  
**Precipitation:** NO  
**Wind:** SW Light Breeze

**Layer Notes:**  
 56-55cm: July 21st IFrc  
 55-47cm: Problematic layer  
 36-35cm: July 4th IFrc

**Specifics:** Pit dug in a Ski Area; Ski tracks on slope; We skied slope

**Notes:** Pit dug in the Remarkables Ski Field, in upper right JJ's. Only seeing test results reach rain crusts when they are isolated on CTs. In general it seems like the rain crusts are still serving to strengthen the snowpack. No results on SH that is still present on top of July 21st rain crust. Would need a very large load to activate these persistent weak layers. Pit dug by Ferg, Mark, and Gabe.
