

Gold Run Pass
 North Cascades, West
 WA
 Elevation: 5500 ft
 Aspect: 290°
 Specifics:

Andrew Kiefer
 12/14/2019 - 1:00pm
 Co-ord:
 Slope Angle: 25°
 Wind Loading: no

Stability:
 Air Temperature: -3°C
 Sky Cover: OVC
 Precipitation: S2
 Wind: S Calm

HS:135
 PF:60
 PS:30
 Layer Notes:

Notes: Old/new interface (12/10 @75cm) produced SP fractures and inconsistent propagation. 12/10 was the culprit in recent small (D1.5) human triggered avalanches in the hwy 542 corridor on northerly aspects above 5500ft. 12/10 is rounding and gaining strength. 11/23 (@50cm) is moist, rounding, and not an issue.
