Cutler Creek Northern Wasatch

UT Elevation: 7500 ft

Aspect: N

Specifics: We skied slope

Carie Frantz 12/21/2019 - 1:45pm

Slope Angle: 20°

Wind Loading: yes

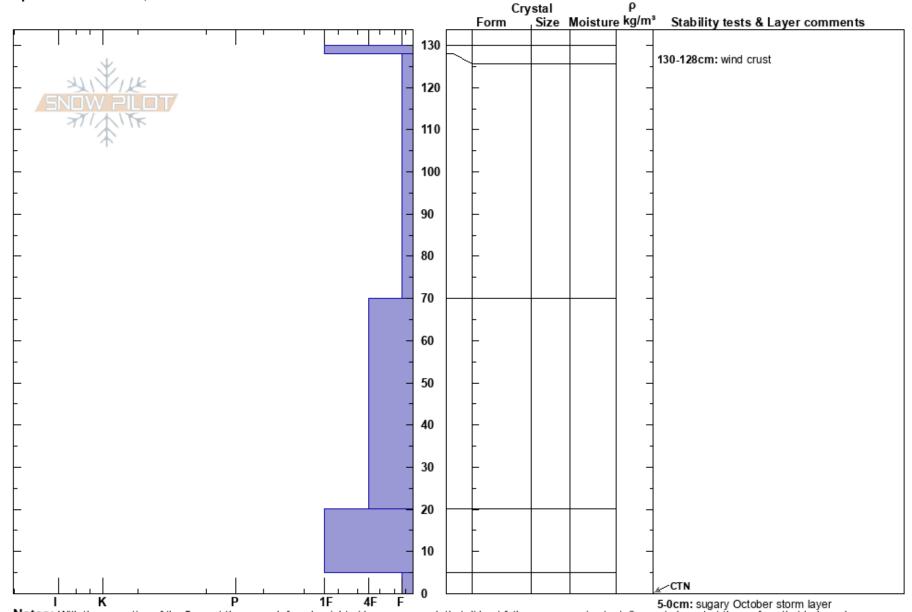

Co-ord: 41.37603N, -111.95253W

Stability: Very Good Air Temperature: Sky Cover: OVC

HS:130 Layer Notes: **PF**:20

130-128cm: wind crust 5-0cm: sugary October storm layer 5-0cm: Problematic layer

I K P 1F 4F F 5-0cm: sugary October storm layer Notes: With the exception of the 5 cm at the ground, found a right-side-up snowpack that did not fail on compression test. 2 cm wind crust at the surface that behaved as a coherent layer and may be of future concern. Entire 125 cm block slid on the bottom 5 cm weak layer when pushed.
