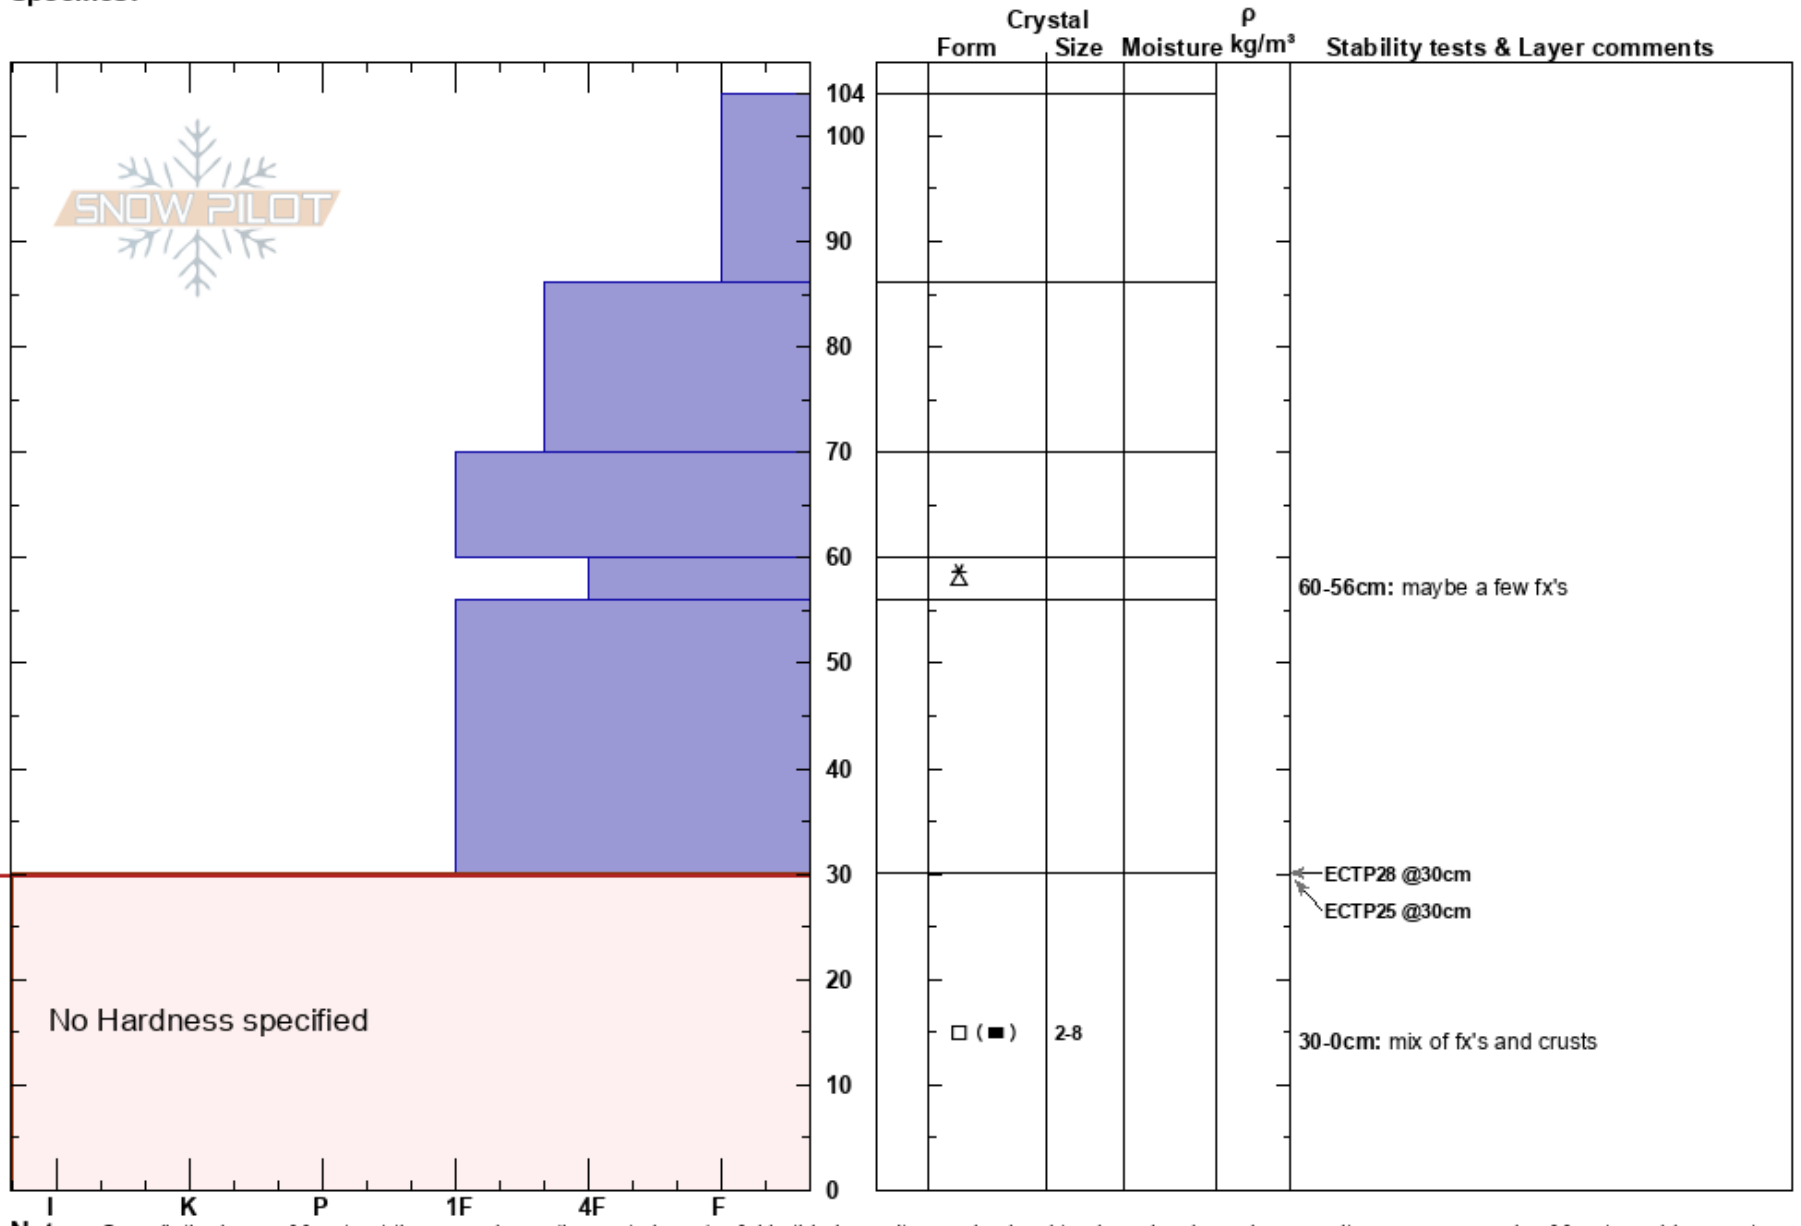
Ant Knolls
Central Wasatch
UT
Elevation: 9344 ft
Aspect: 60°
Specifics:

Mark Staples
12/22/2019 - 11:00am
Co-ord: 40.54091N, -111.57063W
Slope Angle: 16°
Wind Loading: no

Stability: Good
Air Temperature:
Sky Cover: BKN
Precipitation:
Wind: Calm

HS:104
PF:48

Layer Notes:
60-56cm: maybe a few fx's
30-0cm: mix of fx's and crusts
30-0cm: Problematic layer



Notes: Overall, the layer of facets at the ground was (in most places) a fairly thin layer. It was also hard to give a hardness because it was a messy mix of facets and ice crusts. The Fx's were F hardness. The crusts were 1 finger hardness.

The ECT fractured on a very rough plane. Other pits in the area had similar snow depths (about 1m) and a similar weak layer at the ground. It wasn't too concerning.
