Slope Angle: 35°  
Wind Loading: previous  
Specifics: Pit is adjacent to avalanche: crown; We skied slope

Stability:  
Air Temperature: 2.2°C  
Sky Cover: BKN  
Precipitation: NO  
Wind: W Light Breeze

HS:177  
PS: 0  
101-99cm: Problematic layer  
99-94cm: July 19 Crust

Layer Notes:

Notes: Observers: Carbonari/Zoellner

Pit was adjacent to crown of avalanche from Feb 3-10 avalanche cycle. estimated SS-NS-R1-D2.  
Failure appeared to be above the January 19 crust, but stepped down to near the ground in places. Estimated crown height of 1.5 to 2 feet and crown width of approximately 50 feet.
