PF:55 58-55cm: Probably mix of MFpc and FC
Layer Notes:

Notes: Profile objectives: check for SH and compare two different areas in the track (this pit, more unconsolidated than main part of track)

Site characteristics: planar, rocky and shrubby slope. Found spot with no weeds in it.

58-55: Assuming poly crystals and facets. Didn't get crystal ID on layer, but very decomposed.

27-25: Same as other MFcr layer. MFpc and FC
