6-16cm: slab formation
6-16cm: Problematic layer
118-127cm: Basal

Notes: Intention for full profile was to determine the size of wind loading on NE aspect after 2020/01/04 wind event. Also to locate a possible PWL to determine if a wind slab could step down and trigger a PWL. At the current time, sky, wind, and precip were low, however, by end of pit profile, all picked up.

Pit in an open area with a rock and grass bottom.
