 01/08/2020 - 2:45pm
Co-ord: 60.93398N, -149.11048W
Slope Angle: 33°
Wind Loading: no

Stability: Good
Air Temperature: -21°C
Sky Cover: CLR
Precipitation: NO
Wind: E Calm

HS: 140
PF: 45
PS: 20
Layer Notes:
 139-120cm: New Years Storm
 120-119cm: New Year's Eve Raincrust
 119-66cm: 12/24 - 12/30
 66-65cm: Solstice Facets
 66-65cm: Problematic layer
 [More Layer Comments below]

Notes: Fog was dipping up and down at this elevation throughout the tour. No surface weakening observed despite the consistent cold temps. Surface hoar observed under the spruces lower down where the moisture seemed to be trapped by the forest canopy. The ski surface wasn't recrystallized grains but settled boot-top powder capped by a very minor wind/rime skin. Skiing was good while in the open, conditions seemed stable. Aspects that tip west looked to be more wind effected.. Additional Layer Comments: 63-65cm: 12/9 - 12/15 Rain Events; 45-63cm: 12/9 - 12/15 Rain Events; 0-45cm: Solid Basal Layer;
