

Andacite Peak  
 Sierra Nevada  
 CA  
 Elevation: 8070 ft  
 Aspect: NE  
 Specifics: We skied slope

 Co-ord: 39.35103N, -120.36673W  
 Slope Angle: 17°  
 Wind Loading: no

Stability:  
 Air Temperature: -9°C  
 Sky Cover: CLR  
 Precipitation: NO  
 Wind: W Light Breeze

PF:30  
 Layer Notes:  
 62-70cm: Unexpectedly hard layer  
 62-70cm: Problematic layer

**Notes:** Cold, clear, calm day with W winds only noticeable at the ridge top of Andacite Peak. Our CT and TT observations revealed sudden planar failures at 16cm and 32 cm, and an anomalous layer between 62-70cm that was harder than the surrounding layers. All in all, the avalanche danger was considered low, as no significant whumping, cracking, or natural avalanches of any consequence were recognized.
