Slope Angle:
Wind Loading:

Stability: Very Poor
Air Temperature:
Sky Cover:
Precipitation:
Wind:

HS:205
Layer Notes:
 155-95cm: Layer and up = March snow
 80-75cm: Avys broke on this layer
 80-75cm: Problematic layer

Specifics: Pit is adjacent to avalanche: crown; Recent avalanche activity on similar slopes; Recent avalanche activity on different slopes

Notes: This is near the crown of a historic avalanche that came a few feet from SH-91. It was hard to tell but the crown from all of the Sky Chutes may have been connected.
 Y-Chute buried SH-91, hitting three passenger vehicles.
