**Co-ord:**  
**Slope Angle:** 40°  
**Wind Loading:**

**Stability:**  
**Air Temperature:**  
**Sky Cover:** FEW  
**Precipitation:** NO  
**Wind:** SW Light Breeze

**HS:** 137  
**PS:** 15 134-120cm: Problematic layer

**Notes:** This pit was dug at the top of the Endless Couloir before we descended to assess the crown of the natural avalanche @8500ft that occurred on 20170310 in the Endless Couloir. Below 8700ft the snow surface became a supportable crust 5-7cm thick.
