 Co-ord: 39.30780N, -120.37583W
 Slope Angle: 20°
 Wind Loading: yes

Stability: **HS:310**
 Air Temperature: -2°C
 Sky Cover: OVC
 Precipitation: S1
 Wind: SW Light Breeze
 Layer Notes: 142-141cm: Problematic layer

Notes: Graupel layer is easily identifiable and DT22 broke cleanly across this layer.
 Faceted layer below ice crust in old snow is also easily identifiable but did not form a contiguous layer in this area, it was loose but wet and interspersed with ice chunks suggesting a rough snow surface prior to new snow.
