

Spirit Gulch  
 San Juan Range  
 CO  
**Elevation:** 11600 ft  
**Aspect:** SE  
**Specifics:**

Bill Nalli  
 03/22/2020 - 2:00pm  
**Co-ord:** 37.92721N, -107.70663W  
**Slope Angle:** 33°  
**Wind Loading:** no

**Stability:** Good  
**Air Temperature:** -7°C  
**Sky Cover:** BKN  
**Precipitation:** S-1  
**Wind:** NW Light Breeze

**HS:**177  
**PF:**35 153-152cm:Problematic layer  
**PS:**20

**Notes:** Old crust/facet layers have undergone numerous significant melt/freeze cycles and are now in the frozen state. Very strong. Rounding moist facets still exist from 80cm and below but it would take a huge load to break the K hard crusts above. Or another significant warm up. Much closer to the spring regime than I've seen yet this season.
