Co-ord: -44.63113N, 168.87395W
Slope Angle: 41°
Wind Loading: previous

Stability: Very Good
Air Temperature: 0°C
Sky Cover: FEW
Precipitation: NO
Wind: NW Light Breeze

HS:136
PF:6
136-130cm: Problematic layer
130-107cm: top 2cm frozen

Notes: Well bonded snowpack except for bond of DF above MF at surface. High TG will slow the bonding of these layers. Keep an eye on this in regards to upcoming storm. MF at 130cm should Drain and Freeze overnight creating a very strong bridging layer.

At this elevation the lower pack is still dry but at lower elevations the entire pack is moist and Isothermal.

Weak layers in lower pack did not produce a Propagation result from multiple tests and with the temperatures in the lower pack they will continue to stabilise.
