Layer Notes:
16-0cm: Problematic layer

Specifics: Pit dug in a Ski Area; Pit is representative of backcountry; Recent avalanche activity on different slopes; We skied slope

Notes: Had snowed approximately 75cm in recent days. M-FC was weak and breaking down, facets above crust rounding and gaining strength. Snowpack had good strength at this location but steeper nearby north facing terrain had a natural avalanche from harder crust and more wind loading.
