

Furano ropeway carpark Ryan Taylor
 Yubari Mountains 01/12/2020 - 13:47
 Japan Co-ord: 43.32662N, 142.35359E
Elevation: 319 m **Slope Angle:** 30°
Aspect: E **Wind Loading:** no
Specifics: Pit dug in a Ski Area; Pit is representative of backcountry

Stability:
Air Temperature: -2°C
Sky Cover: BKN
Precipitation: S1
Wind: W Light Breeze

HS:70 **Layer Notes:**
PF:50 5-0cm: 20201112 rain event
PS: 30 5-0cm: Problematic layer

Notes: Heavy snowfall overnight and continuing as moderate - light snow throughout the day.

20201112 rain event layer at bottom of pack does not fully cover ground in places so no planar surface for any sort of deep slab avalanche, however may be different up high. 2 min pit in bank above Furano ropeway carpark, spent little time looking at grain size, type and did not stability test. Still not really enough snow for avalanches over the elevation of the ski area. Snow almost twice as deep at top of ski area as you would expect.
