Co-ord: 39.13277N, -120.23895W
Slope Angle: 32°
Wind Loading: no

Stability: Good
Air Temperature:
Sky Cover: FEW
Precipitation: NO
Wind: Calm

HS:63
PF:25
PS: 3
 56-55cm: Freezing rain event
 55-40cm: Problematic layer

Layer Notes:

Notes: Pit dug on open shaded slope below treeline. PST @ 35 cm had SF into upper facet layer that then propagated to column end. Freezing rain event created crust on top of old near surface facets which are still weak. This looks like a developing PWL to be named the Dec 11 facet layer.
