**PS:** 15 35-0cm: prob was nov MFCR, now fct  
 35-0cm: Problematic layer

**Notes:** Upper areas wind scoured, lower areas wind loaded from different system.

Bottom 10-40 cm's greatly affected by rough terrain and plant growth, but uniformly showing faceting and weakness. Tests were done where there was no branch interference. Ground was very rough and test results appear slightly higher than facet layer on chart. Both tests failed on facet layer.
