 Co-ord: 40.61437N, -111.62850W
 Slope Angle: 33°
 Wind Loading: no

Stability: Poor
 Air Temperature:
 Sky Cover: OVC
 Precipitation: S1
 Wind: SW Moderate

HS:65
 PF:65
 PS:20
 63-62cm: Solstice Rime Crust
 35-25cm: Problematic layer

Specifics: Collapsing, widespread; Cracking; Recent avalanche activity on similar slopes

Notes: The Solstice crust exists on all slopes below about 10,000 feet. On all south slopes and most east slopes this is a sun or temperature crust. A fragile rime crust exists on Northeast through North through Northwest and is now buried under today's new snow.
