**Co-ord:** 45.89582N, -110.96909W  
**Slope Angle:** 32°  
**Wind Loading:** previous

**Stability:** Good **HS:**107 **Layer Notes:**  
**Air Temperature:**  
**Sky Cover:** SCT  
**Precipitation:** NO  
**Wind:** NE Calm

**Notes:** Dug 100 feet below summit, in wide NNW couloir. Pre-season (summer/fall) storm dropped 3-5' of snow over last week, came in warm and dense with strong wind, bonded well. Have observed widespread 10-20cm rain/melt crust on ground that formed at start of storm. This layer is moist in some pits and well bonded to warm/moist snow above. No sign of collapse (or shear). Main concern is fresh wind load.
