Layer Notes:
67-55cm: Problematic layer

Notes: Ski area has been closed since 20210818, today was the first day that we were allowed back to investigate the snowpack. A even MFcr covers the summit slopes. Several size 1 Lw and Swt were observed on N1/2 below 1,800m, failing at ground level. It appears that these have failed in the last 48/72 hours.
