

Bridger Range, Ramp
 MT

Spencer Jonas
 11/11/2017 - 2:45pm
 Co-ord: 45.82853N, -110.93153W

Stability:
Air Temperature:
Sky Cover: BKN
Precipitation: NO
Wind: E Light Breeze

HS: 105
Layer Notes:
 19-1cm: Problematic layer

Elevation: 8000 ft
Aspect: NE
Wind Loading:
Specifics: Ski tracks on slope; We skied slope

Notes: There was an air pocket between the ice crust that formed the bottom layer and the ground. The column failed when the ice broke free from the little ground that it was attached to, a small root and rock at the back of the column. Our layer of concern was the old September snow, which showed no sign of instability at its interface. It is hard to interpret the ectp as a sign of instability, it seemed to be more an issue of ground condition specifically beneath the column and not an indicator of overall instability at the
