**Co-ord:** 42.17322N, 23.37378E  
**Slope Angle:** 32°  
**Wind Loading:**

**Stability:**  
**Air Temperature:** -10°C  
**Sky Cover:** FEW  
**Precipitation:** S1  
**Wind:** NE Calm

**HS:** 170  
**PF:** 40  
**PS:** 30  
**Layer Notes:**  
 133-132cm: very weak;  
 132-100cm: growing the next days  
 132-100cm: Problematic layer  
 65-0cm: clustered;

**Notes:** Very light powder snowfall (30 cm), but at the beginning with some wind, which consolidated slightly a lower powder layer; In the following days strong NE winds, they blew off the powder at the higher parts of the slopes and created lots of wind-loads on S slopes! Concerns about growing facets below a thin crust layer (at some other locations a bit thicker, but still not so solid)!
