Stability: Poor  
 Air Temperature: 27°F  
 Sky Cover: SCT  
 Precipitation: NO  
 Wind: NE Light Breeze

HS:55  
 PF:50  
 20-15cm: Problematic layer

Specifics: Pit is adjacent to avalanche: other; Collapsing, widespread; Collapsing, localized; Cracking; Recent avalanche activity on similar slopes

**Notes:** Dug pit just below fresh (natural) avalanche debris, likely from the night before. Widespread whumpfing and shooting cracks in the mid-elevations. Remote triggered a small avalanche from 150 - 200' away. Facets over MF crust was obvious weak layer. Some of the more reactive snow I've ever seen!
