Specifics: Pit dug in a Ski Area; Pit is representative of backcountry; Cracking

Loveland SP
 12/03/2017 - 12:30pm
Co-ord: 39.67249N, -105.92425W
Slope Angle: 28°
Wind Loading: previous

Stability:
Air Temperature: -2°C
Sky Cover: SCT
Precipitation: NO
Wind: W Strong

HS: 105
PF: 3
Layer Notes:

Notes: This profile has multiple layers of concern. All the crust/facet combinations are troublesome. The crusts are 3 to 4 cm thick and very supportable. Each could be a bed surface on its own. However, future loading will determine which one and how deep failure occurs. It seems this matrix could support quite a bit of weight before it goes.
