**Layer Notes:**  
 210-197cm: slides off easily  
 197-195cm: Problematic layer  
 168-147cm: fairly bonded crystals;  
 147-0cm: well bonded old layers

**Notes:** At the base of the Venue of Bansko Freeride Qualifier 2022; The top 10-15 cm are powder snow on top of solid melt-freeze crust (3-4 cm). The top layers slide off very easily, but the depth is small; In some locations close to ridges soft wind-loaded snow, producing small avalanches; The top parts of the slope - less snow, blown away;

In the next 3 days - storm cycle with total of 100 cm of powder snow; Some natural avalanches (soft snow), no slabs;
