**Co-ord:** 47.97748N, -113.84535W  
**Slope Angle:** 22°  
**Wind Loading:** no

**Stability:**  
**Air Temperature:** -12.5°C  
**Sky Cover:** X  
**Precipitation:** S-1  
**Wind:** SW Light Breeze

**HS:**106  
**Layer Notes:**  
 46-16cm: thin crust at 46cm  
 46-16cm: Problematic layer

**Notes:** After CT23@69cm, removed snow down to 69cm and continued taps. On 35th tap with max force I got the layer of concern at 46 cm to fail with a sudden planar fracture.
