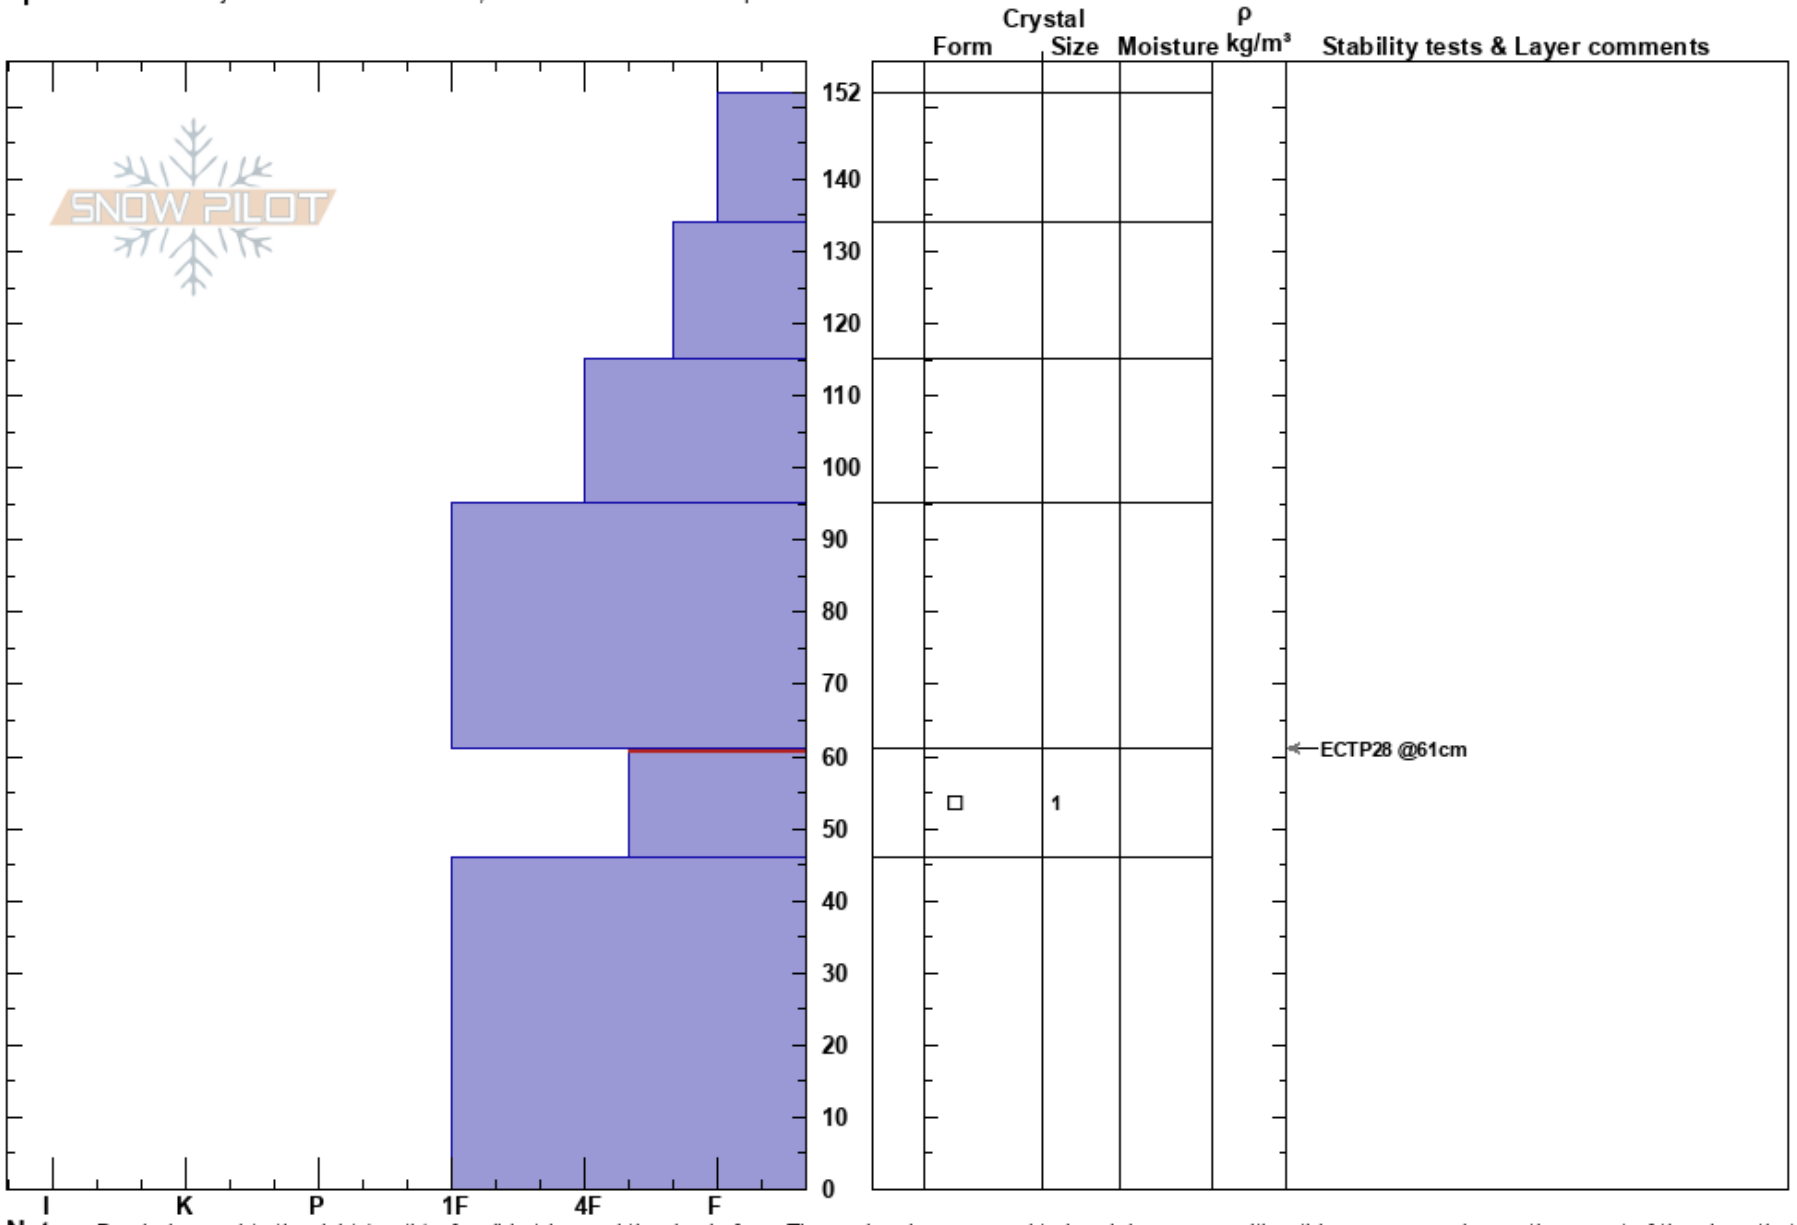
12/17/2022 - 12:20pm
Co-ord: 40.85784N, -111.75237W
Slope Angle: 31°
Wind Loading: no

Stability: Fair
Air Temperature:
Sky Cover: CLR
Precipitation: NO
Wind:

HS:152

Layer Notes:
61-46cm: Problematic layer

Specifics: Pit is adjacent to avalanche: other; Snowmobile tracks on slope



Notes: Dug below and to the right (north) of a slide triggered the day before. The avalanche appeared to break in an area with a thinner snowpack, mostly on part of the slope that was not wind loaded. The wind loaded part under the corniced ridgeline appeared to have avalanhched sometime before.
