

**HS:103**      **Layer Notes:**  
 17-0cm: Some striations  
 17-0cm: Problematic layer

**Notes:** Revisited a previous remotely triggered avalanche from Dec 4, 2022 failing on the Dec 1 facet layer.

Where avalanche occurred about ~ 60-70cm less snow than adjacent area. A moderate to strong AR storm is expected early next week with significant liquid precipitation.

No weakness found on the Dec 1 PWL with snowpack tests in this area.
