

Specifics:

Wind Loading: yes

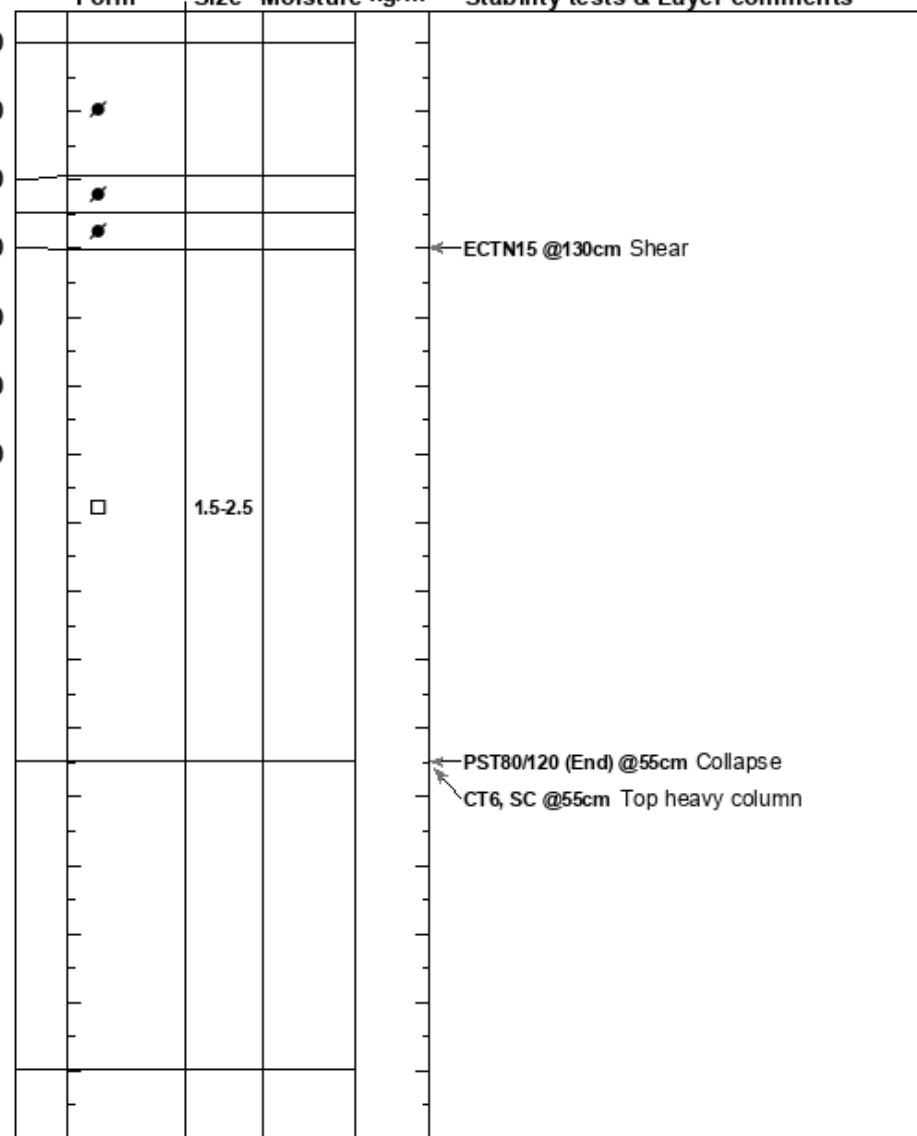

Wind: N Moderate

55-10cm: Problematic layer

55-10cm: Problematic layer

Form	Crystal Size	Moisture	ρ kg/m ³	Stability tests & Layer comments
------	--------------	----------	--------------------------	----------------------------------

Notes: Windloading overnight had obscured much of bootpack. Continued moderate loading on Southerlys. Over structure on polar aspects near treeline is good with the LOC down 90-120cm and no notable instability in the overlying slab. Second CT produced no fracture of LOC.
