**Co-ord:** 13S 400355W 4363546N  
**Slope Angle:** 20°  
**Wind Loading:** yes

**Stability:** Fair  
**Air Temperature:** -6.5°C  
**Sky Cover:** SCT  
**Precipitation:** NO  
**Wind:** SW Moderate

**HS:** 110  
**Layer Notes:**  
 12-1cm: Problematic layer

**Specifics:** Collapsing, localized; Recent avalanche activity on different slopes; Ski tracks on slope; We skied slope

**Notes:** Consistent moderate winds at ridge top throughout the day. Minimal cracking, only observed near/at ridge top in wind pillows. Lots of noises coming from the snow as we traveled ATL. Skin track was nearly 18" deep in spots. Ran out of time to do a PST on depth hoar layer; I would expect an End result.
