Layer Notes:
106-75cm: Early Jan. wind slab
75-41cm: Pre-Xmas storm
41-26cm: DDL
41-26cm: Problematic layer
26-0cm: Thick crusts and facets

Specifics: Collapsing, localized; Recent avalanche activity on similar slopes

Notes: Whomping (collapse) upon taking off skis. Facets very well-developed at this location and may persist as a PWL and part of our avalanche problem for the rest of January at mid elevations and lower high elevations. Widespread surface hoar development (3-6 mm).
