**Co-ord:**  
**Slope Angle:** 32°  
**Wind Loading:**

**Stability:**  
**Air Temperature:**  
**Sky Cover:** FEW  
**Precipitation:** NO  
**Wind:** Calm

**HS:** 47  
**PF:** 15  
**PS:** 5  
 0-2cm: rimed surface particles  
 26-27cm: Problematic layer  
 27-47cm: glacial ice interface FC

**Notes:** Snowpack interface/bond to glacial ice. Test pit directly below large top of bowl crevasse.  
 Compression tests both failing on Fc under crust. HS near top of glacial ice consistently 40-80cm, increasing in depth lower down due to debris.
