Co-ord:
Slope Angle: 29°
Wind Loading: no

Stability: Fair
Air Temperature: -9°C
Sky Cover: OVC
Precipitation: S1
Wind: SE Light Breeze

HS:102
PF:95
 0-10cm: HST
 53-60cm: Problematic layer

Notes: -Profile objectives: Investigate Dec 2nd interface, asses HST bonds, test basal facets.

- Rounding, yet visible SH 3mm 53 down, 5-10cm of FC at base of snowpack.
- Repeated CT as first one failed at base possibly due to human error whilst isolating column.

Worth noting - the decomposing surface hoar interface 53cm down failed on CT with 2 extra hits from the shoulder SP. ECT propagated across entire column SP and slid easily with one extra hit from the shoulder.
