 Layer Notes:
 70-65cm: Q1 SP
 33-30cm: Well rounded
 30-20cm: Decomposing
 20-0cm: Well rounded

Notes: Very crusty below 8300ft, turning to dense pow up higher. This was probably one of the less stable areas in the past week of pits. It would seem that more snow/weight could bump up the chance of an avalanche in certain areas of this bowl. Also, the PWL in this area is only 60cms below the surface.
