 Layer Notes:  
 45-34cm: angulated facets  
 45-34cm: Problematic layer

**Notes:** Cold temps, calm winds that picked up to Light from the west at 10,900'. Structure at this location on a SW aspect was dry faceted snow. Granted this is only one data point- but similar to west facing. Without more of a slab (wind or new snow); stability tests show it isn't going to avalanche. GCS
