 01/07/2024 - 1:30pm
 Co-ord: 11U 654807E 5420351N
 Slope Angle: 30°
 Wind Loading: no

Stability:
 Air Temperature: -11°C
 Sky Cover: OVC
 Precipitation: S1
 Wind: Calm

HS:189
 PS: 40
 Layer Notes:
 127-125cm: Problematic layer
 50-40cm: Some perc tubes
 40-0cm: Irregular hardness

Notes: Pit dug adjacent to flank of fresh D2 avalanche. Structure at crown different - slab composed of sluff debris.
 Another fresh D2 soft slab a few hundred yards north - likely storm + recent snow.
 When breaking trail, recent snow felt upside down, though very low density for both layers.
