Stability: HS:210
 Air Temperature: 2.8°C PF:45 122-121cm:Problematic layer
 Sky Cover: SCT
 Precipitation: NO
 Wind: W Light Breeze

Notes: Lots of roller balls and loose wet sluff on all aspects due to the warm temps. Buried surface hoar layer at 120cm still has cause for concern. Grains seemed to be starting to heal, but still a little reactive in tests. Did not propagate more than a few CM's on ECTN25, but propagated the rest of the way across and came out high energy with some hits on the other side of the column after test completion.
