HS:250
 Layer Notes:
 205-202cm:Problematic layer

Specifics: Recent avalanche activity on similar slopes; Ski tracks on slope; We skied slope

Notes: Evidence of widespread avalanche activity prior to or during current storm. Avy debris observed near bottom of most avy path run-out zones up and down the Castle Crest zone. My best theory is that this debris and slide activity is the result of cornice failures during the recent warm sunny weather that preceded the current snow storm.
