Layer Notes:
 235-227cm: New snow
 227-222cm: Likely from warm temps+wet
 227-222cm: Problematic layer
 198-192cm: Layer with sand
 120-105cm: Bot. break when col removed

Notes: Very stable conditions observed at this location and likely at all other locations similar in altitude and not wind-loaded from the latest storm. There is no wind loading here from this past storm, which dropped 8cm of new snow. Most layers have bonded very well together, likely due to the warm temps hovering around freezing for the past month!

Locations higher up that were subject to more wind loading during the latest snowfall may be more unstable!
