

Hidden Bowl  
 Treble Cone  
 New Zealand  
**Elevation:** 2020 m  
**Aspect:** SE

Cameron McAlpine  
 16/06/2024 - 11:00  
**Co-ord:** -44.63225N, 168.87390E  
**Slope Angle:** 35°  
**Wind Loading:** previous

**Stability:**  
**Air Temperature:**  
**Sky Cover:** FEW  
**Precipitation:** NO  
**Wind:** Calm

**HS:**65  
**PF:**20 26-15cm:Problematic layer

**Specifics:** Pit dug in a Ski Area; Pit is representative of backcountry; We skied slope

**Notes:** 20-30 Cm PP/DF past 96 hrs @1900m and above without little wind effect observed, this new addition to the snow pack overlays a relatively poor snow structure (may snow) with multiple Crusts and Fc /DH layers. Currently no avalanche issues has be observed however this could become a problem with >20cm of PPavailable for transport. This layer is to be monitored for change in structure and load
